

Today's Topic

Object Oriented Programming

The Observation

“Everything in python is
an Object”

But what is an Object?

And what is OOP?

The problem!

The Solution

Generality to Specificity

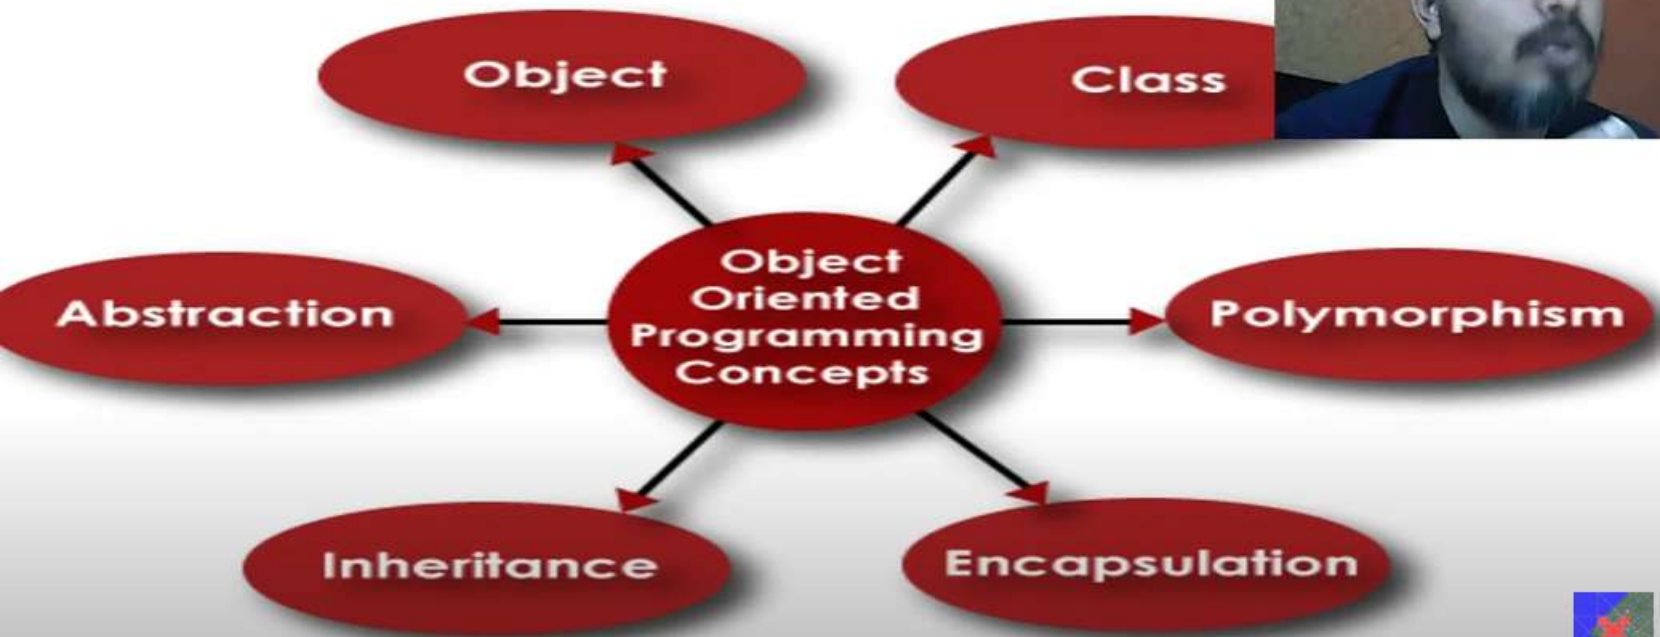

Press Esc to exit full screen

So, What is Object Oriented Programming

Class

Class is a blueprint

Class

Data or
property

Functions or
behavior

Class Basic Structure

```
class Car:
```

```
    color="blue" #data
```

```
    model="sports" #data
```

```
    def calculate_avg_speed(km,time):
```

```
        #Some code
```

Object

Object is an instance of the Class

Object Examples

1. Car----->WagorR // wagonr=Car()
2. Sports----->Gilli Danda// gillidanda=Sports()
3. Animals----->Langoor// langoor=Animals()

Methods Vs Functions

Magic Methods

A.k.a Dunder Methods
